Professional Summary

With over 16 years as a software engineering leader, I've crafted scalable, full-stack solutions that drive impact, from slashing service requests by 47% with an NLP chatbot at Oracle to delivering a B2B payment platform MVP ahead of schedule at Convera. My expertise spans **React**, **TypeScript**, **Node.js**, and **Java**, with a knack for guiding teams to build robust systems and fostering collaboration across departments. I thrive on mentoring engineers and architecting solutions that meet enterprise demands with precision and reliability.

Skills

Frontend Development: React, TypeScript, JavaScript, Redux, Redux Toolkit, HTML, Zod

Backend Development: Node.js, Express.js, Java, Spring Boot, Python, FastAPI, PostgreSQL, GraphQL, MongoDB

DevOps: Kubernetes, Docker, AWS Lambda, SysAdmin, Weblogic, SQL

Leadership: Team Leadership, Project Management, Mentorship, Cross-Functional Collaboration, JIRA, Agile Methodologies

Professional Experience

Convera

Convera is a global leader in B2B payment solutions, specializing in cross-border transactions and financial services.

Lead Full-Stack Engineer (Jan 2024 – Jul 2025)

- **Spearheaded** a team of 7 engineers and 1 QA to launch a B2B payment platform MVP ahead of schedule, crafting a microfrontend with **React**, **TypeScript**, **Zod**, and **Redux** for seamless user experience via shared login context. Tackled tight deadlines, ensuring zero major bugs at launch.
- **Designed** scalable backend APIs using **Node.js Lambda** functions and **Java Spring Boot** microservices, supporting high-volume transactions and aligning with enterprise-grade standards.
- **Mentored** engineers through code reviews and pair programming, boosting team efficiency and embedding best practices in **Agile Methodologies** for consistent delivery.
- **Implemented** secure payment workflows with **OAuth** and **JWT** authentication via **Okta**, reducing audit resolution time by 30% and enhancing security compliance.
- **Orchestrated GitLab** CI/CD pipelines with **Docker** and **Kubernetes** on **AWS**, collaborating with cross-functional teams to ensure high-quality deployments.
- **Optimized** data retrieval with **PostgreSQL** schemas, improving system performance by 45% through Python-driven transaction processing.

Oracle

Oracle is a multinational technology company providing enterprise software, cloud solutions, and database management systems.

Principal Software Engineer (Feb 2017 – Jan 2024)

- **Pioneered** an NLP-based chatbot to cut service requests by 47%, using **Node.js** and Oracle **botsSDK** to extend **Oracle Digital Assistants**, addressing high SR volumes and enhancing customer support scalability.
- **Architected** a low-code SPA generator for knowledge base documents, leveraging **JavaScript**, **TypeScript**, and **Redux** for the frontend and a **Kubernetes-Dockerized Weblogic** cluster for middleware. Integrated **Java JAX-RS** with ATP database, streamlining enterprise document creation.
- **Guided** cross-functional teams to align technical solutions with business goals, using **JIRA** to manage workflows and deliver scalable, high-performance systems.
- **Mentored** engineers through regular code reviews, promoting best practices in **Java** and **React** to foster technical leadership and team growth.
- **Configured Kubernetes**-based backends in Oracle Cloud (OCI), ensuring seamless scalability for internal tooling initiatives.
- **Developed** a **Next.js** call center dashboard providing aggregate status reports, enabling agile planning for staffing and employee evaluations.

Senior Software Engineer (Jul 2013 – Jan 2017)

- **Led** development of a widget-based knowledge advisor document with **JavaScript**, **HTML**, **XSLT**, **XML**, and **ActionScript** (Adobe Flex), enabling dynamic documentation that improved enterprise user adoption.
- **Collaborated** with stakeholders to refine system requirements, shortening development cycles and ensuring business alignment.
- **Optimized** frontend performance with efficient **JavaScript** rendering, reducing load times and enhancing user experience.

Software Engineer (Jan 2010 – Jul 2013)

- **Built** backend tools like a video streaming service and wiki farm using **PHP** and **Perl**, enabling proactive IT responses and minimizing client system downtime.
- **Took ownership** of full-stack duties, including **DevOps** and **SysAdmin**, ensuring system reliability after team reduction.
- **Automated** data processing with **Perl**, boosting efficiency and supporting proactive issue resolution for enterprise clients.

Technical Support Engineer (Oct 2008 – Dec 2009)

- **Supported** Oracle's enterprise resource management application, resolving critical issues to maintain system uptime for contracted IT departments.
- **Worked closely** with clients to troubleshoot performance issues, improving application reliability and user satisfaction.
- **Enhanced** knowledge base documentation, streamlining support processes for faster issue resolution.

Side Projects

JSON-to-PostgreSQL Schema Sync (2025 - Present)

Developed a Python application to parse JSON files, dynamically creating or updating **PostgreSQL** schemas and detecting missing columns to streamline report design. Automated creation of SQL indexes and primary keys based on JSON structure analysis, significantly improving query performance.

Resume and Application Tracking System (2025 - Present)

Built a **React** SPA with **Next.js**, **Golang**, and **PostgreSQL**, incorporating **RESTful APIs** and **JWT** authentication for a secure, scalable job tracking tool.

Leveraged **TypeScript** and **React Hooks** to craft a responsive, user-friendly interface, enhancing usability for personal project management.

Simulated Python Dashboard (2025 - Present)

Created a Python script generating sensor data every 5 seconds using a **Pydantic** object model, with a **FastAPI** backend writing to **SQLite**, and a **Chart.js** dashboard with **WebSocket** for real-time monitoring.

Education

DeVry University, Bachelor of Science in Computer Science, March 2007
